AMENDMENT UNDER 37 C.F.R. §1.111

USSN: 10/014,516

## **AMENDMENTS TO THE SPECIFICATION**

## Please replace the paragraph bridging pages 5 and 6 with the following:

Then, after the tension of the web is progressively increased at a predetermined rate, the tension is reduced at a predetermined rate while the web is being wound around the core. The web is thus wound around the core to which sufficiently sufficient rigidity is imparted, without being subjected to an excessive load. As a result, a roll produced by winding the web around the core is free of edge undulations or irregularities on its end faces, and is of a good quality free of damage and winding irregularities.
